

DRAIN CLEANER

TYPE - PROFESSIONAL

NEW

WIRELESS REMOTE CONTROL

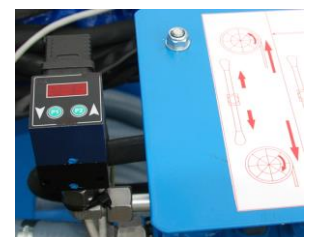

Wireless remote control is seen as an excellent option on a PROFESSIONAL Drain Jetter. The functions equipped with WRC can be controlled from the ditch side or elsewhere up to a distance of max. 100 metres. The machine operator can stand near the end pipe to see what function needs to be applied. This avoids walking back and forth to the machine to control the function required.

In case of a remote failure, or the need of manual operation, manual control is always possible as manual control levers are standard mounted on the PROFESSIONAL Drain Jetter.

ARS SYSTEM

The ARS SYSTEM can shift the forward movement of the pe-hose backwards when due to severe pollution the forward movement is going too heavy. This allows clearing the way forward in the drain pipe.

This system developed by us and already 4 years successfully implemented on the PROFESSIONAL Drain Jetter greatly reduces wear on the cleaning hose and slipping of the drive wheels on the hose till it bursts.

ELECTRIC ADJUSTABLE METER COUNTER

The EC meter counter replaces the mechanical meter counter supplied on the PROFESSIONAL Drain Jetter.

The length of the drain pipe to be cleaned is typed into the computer before the cleaning hose enters the drain pipe. When the drive system is started, the computer starts counting the number of meters that the pe-hose is fed into the drain and this is shown on the display of the remote control.

When the length that was typed into the computer is reached, the drive system will reverse and pull the pe-hose out of the drain and then stops automatically.

The machine is ready for the next drain.

EXTRA REEL FOR PRESSURE HOSE

On the RH side an extra hand or hydraulically operated reel with ½" hose can be mounted on the PROFESSIONAL Drain Jetter. This can be used for cleaning of sewer pipes or older small diameter [3 cm] drain pipes.

Also a hose can be connected for cleaning of equipment, stables, pavement etc.

EXTRA REEL FOR SUCTION HOSE

On the LH side of the PROFESSIONAL Drain Jetter a manual or hydraulic driven reel with the suction hose can be mounted. The suction hose can then be reeled in and out manually or hydraulically. This avoids struggling around with a water filled suction hose.

TOOLBOX/BIN

A toolbox can be mounted on the PROFESSIONAL Drain Jetter. This enables easy storage of e.g. spades, pins, locator etc. As well as various nozzles and tools.

Thus all tools and necessities are ready available and neatly stored.
